

Custom Straighteners & Accessories

Many straightener applications require custom configurations due to limitations in the process line, desire for more automation, flexibility of use, and experience or training levels of the users.

Here are some examples of what TAK has done in the past. Please use the “**contact us**” form to relay your specific straightness needs.

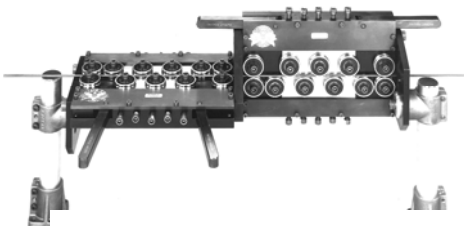

Heavy duty pressed rolls with custom cam settable wire gaps, radius ground bearings, dirt shield, and special adjustable frames.

Motorized, wire size selectable, rotary turret type with auto feed & precision rolls for .250” / 6.25mm and larger hex shaped wire. Included custom torque wrench and leveling screws.

Custom portable eight plane straightener, spring loaded, wire line height adjustable with sealed high speed bearings.

Specialized mounting components including dual pivot capability, vertical adjustment, quick releases, and wire axis rotation.

Custom ground bearing rolls for special shapes, sealed bearings, ceramic coatings, lubrication ports, and polished or honed finishes.
